Rapid, simple closure
May reduce operative time vs. subcuticular sutures¹
Eliminates percutaneous insult
Improved comfort & cosmesis
May result in less pain immediately post-op in c-sections²

No percutaneous metal staple removal
No suture knots
Evidence of reduced wound complications vs. metal staples in c-sections³
Eliminates risk of needlestick injuries at the time of closure⁴

Cosmetic Result of INSORB Absorbable Skin Staples – Cesarean Section

At Surgery

At 3 Weeks

There are multiple factors that can affect patient results and recovery and these results may not be representative.
Redefining Optimal Skin Closure

The patented INSORB skin stapler is a sterile, single patient use device that deploys 30 absorbable staples, sufficient to close an incision up to 21 cm in length.

- Rapid, simple closure
- May reduce operative time vs. subcuticular sutures
- Eliminates percutaneous insult
- Improved comfort & cosmesis
- May result in less pain immediately post-op in c-sections
- No percutaneous metal staple removal
- No suture knots
- Evidence of reduced wound complications vs. metal staples in c-sections
- Eliminates risk of needlestick injuries at the time of closure

The patented INSORB skin stapler is designed to create uniform, symmetric dermis-to-dermis closures.

- Increases skin eversion, which may improve healing and cosmesis
- May reduce operative time
- May result in reduced hand fatigue
- Eliminates risk of needlestick injuries at the time of closure

Benefits of INSORB vs. Suture

The INSORB skin stapler eliminates percutaneous insult.

- Prevents the potential of "railroad track" scars
- Evidence of reduced wound complications in c-sections
- Eliminates cost, patient inconvenience, anxiety and discomfort associated with percutaneous metal skin staple removal

Benefits of INSORB vs. Metal Staples

Due to decreased IV NSAID use, INSORB may lead to $200 per patient savings in c-section cases.

There are multiple factors that can affect patient results and recovery and these results may not be representative.
