Lone Star Veterinary Retractor System

Animal Surgery Just Got Easier

For a wide range of animal procedures.

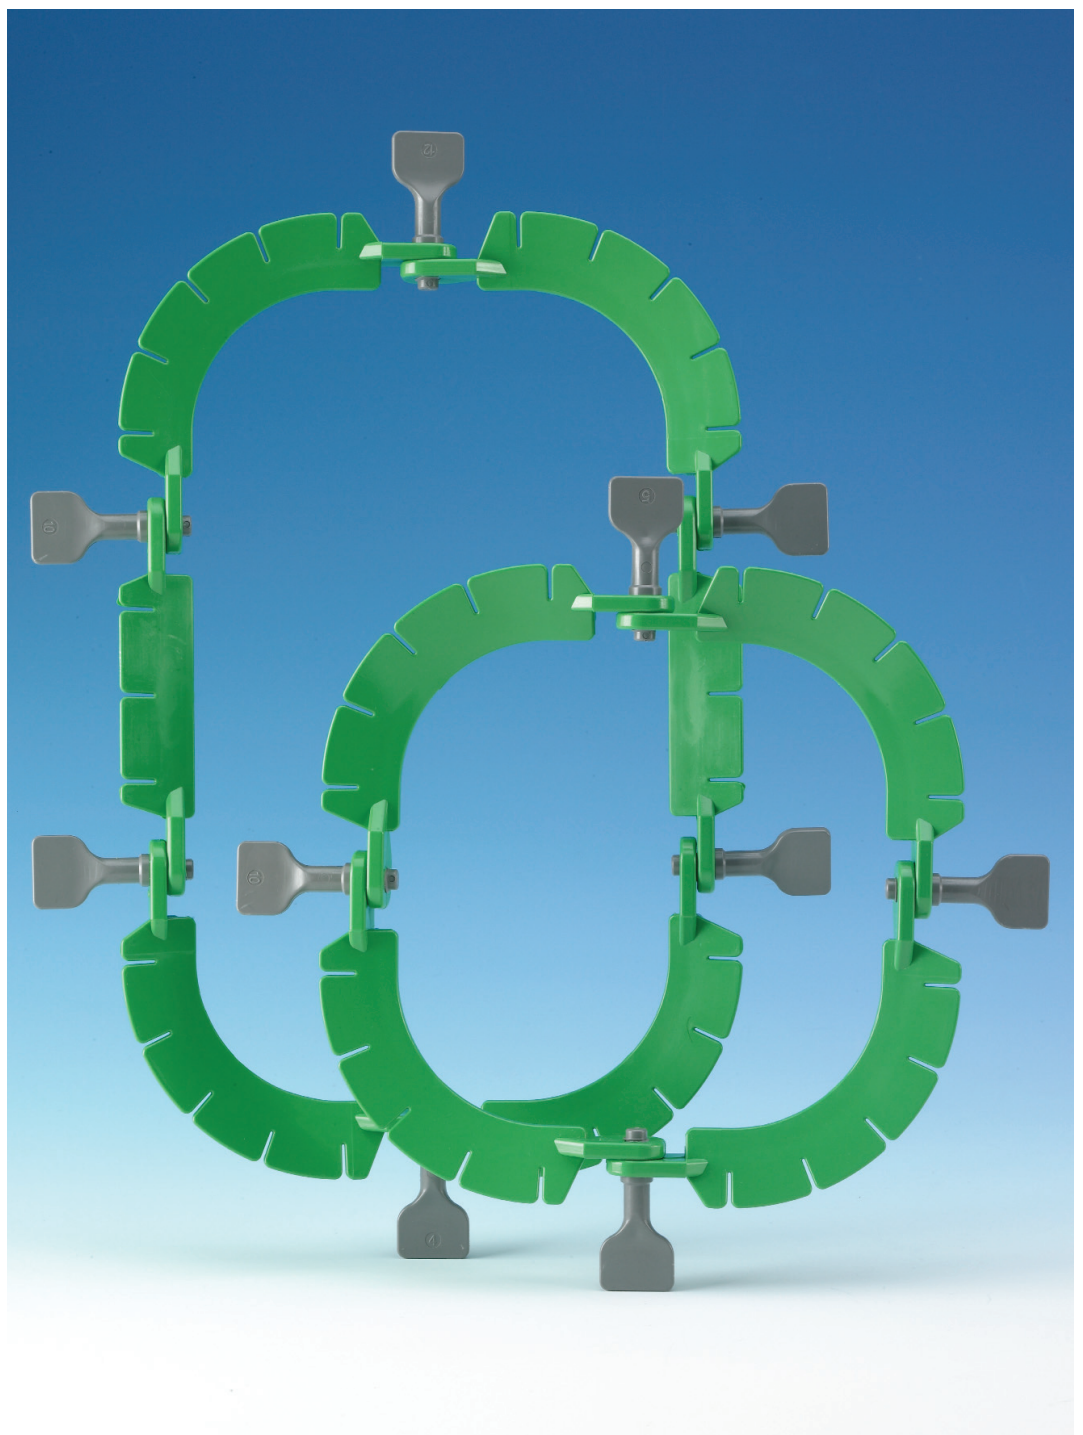

Benefits:

- Low profile system, provides better visibility and access to the surgical site
- Dynamic adjustment of surgical field as dissection progresses
- Allows for unassisted surgery
- Provides freedom to operate with both hands
- Fully autoclavable, the system is cost effective for the busy surgical practice

of Women's Health Care™*

Unparalleled exposure. Under your control.

At last... surgical site access the way it should be. This unique retractor system delivers uncluttered access using counter-traction with small hooks. The result... a surgical site that easily adapts as the procedure progresses.

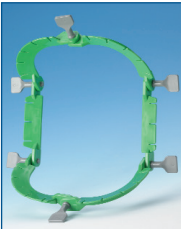

Applicable Procedures Include:

- Cataract Removal (canine)
- Inguinal Hernia Repair (canine)
- Laminectomy (canine)
- Microsurgery (rodent)
- Ovarian cyst (canine)
- Rumenotomy (sheep)

The Lone Star Veterinary Retractor System consists of two autoclavable components, the retractor ring and hooks. The retractor ring can easily be adapted to the anatomy of the surgical site. The hooks provide precise retraction with adjustable tension, without obstructing the surgical site. All products have a 1-year warranty and are validated through 20 autoclave cycles.

Ordering Information:

Product Number	Description	
4405	Retractor ring (25 cm x 14.2 cm) with 6 thumb screw releases for articulation. Packaged singly (non-sterile).
