

## Lone Star® Retractor System and Elastic Stays

Providing exceptional visibility and access<sup>1,2</sup> for pelvic repair procedures.

The Lone Star Retractor System offers simple, intuitive retraction at the surgical site to optimize access to patient anatomy and improve visibility.<sup>2</sup> Highly flexible, the system is used with a wide variety of accompanying stays that can be repositioned to reveal additional layers as the surgery progresses.

The Lone Star Retractor System and elastic stays are used in an array of transvaginal procedures, including many common pelvic repair and reconstruction surgeries such as:

- Colpocleisis and sacrospinous fixation
- Urinary incontinence procedures including slings
- Anterior and posterior colporrhaphy
- Vaginal mesh revision/excision
- Rectovaginal fistula repair
- Perineoplasty
- Episiotomy repair, vaginal biopsies and cysts
