

INSORB®
Subcuticular Skin Stapler

by  CooperSurgical®

The Rapid, Cosmesis-Proven Skin Closure Solution^{1,2,3}

Redefining Optimal Skin Closure

Reduce cost while saving time with INSORB®^{2,5}

INSORB® skin stapler is a sterile single-use device that deploys 30 absorbable staples, sufficient to close an incision up to 21 cm in length.^{4,8,*}

INSORB® is composed of a copolymer derived from polylactide-polyglycolide (PLA/PGA) which has a well-established history in wound closure.⁶

INSORB staples are placed entirely underneath the surface layer of skin (epidermis). These staples offer clinical benefits, are cost-effective,^{2,3} and highly cosmesis-proven.^{2,3} Wound care for patients with absorbable staples is similar to care for conventional incision closures, and may even have fewer complications.^{9,12}

Interrupted Closure

INSORB staples create an interrupted closure that naturally allows for immediate wound drainage.⁸

Wound Eversion

Using the INSORB stapler, surgeons can create a raised incision line (eversion). Eversion is a technique usually used by plastic surgeons. It keeps tension away from the wound edges and flattens over time to create a minimal scar. The INSORB absorbable skin stapler allows eversion to be used in more common surgeries.^{7,8}

Eliminates Percutaneous Injuncts

Incisions closed with INSORB do not have the numerous skin perforations of metal skin staples.¹¹ Clinical studies have shown that using INSORB staples may reduce wound complications and may result in less pain immediately post-op, compared to percutaneous metal skin staples.^{12,14,††}

Wound Care for Patients With INSORB Staples

It is normal to observe a raised incision line post-operatively. This desirable wound eversion will gradually flatten over time as the wound heals.⁸

Cosmetic Result of INSORB® Absorbable Skin Staples

Benefits of INSORB® vs Suture

INSORB absorbable skin stapler is designed to create uniform, symmetric dermis-to-dermis closures.

- Increases skin eversion, which may improve healing and cosmesis^{2,7}
- Reduce closure time compared to sutures^{1,3}
- May result in reduced hand fatigue⁵
- Eliminates risk of needlestick injuries at the time of closure^{8,9}
- Less hypertrophic scarring^{10,†}

Benefits of INSORB® vs Metal Staples

The INSORB absorbable skin stapler eliminates the percutaneous insult created by metal skin staples.^{8,11,‡}

- Prevents the potential of “railroad track” scars^{8,11}
- Evidence of reduced wound complications in c-sections¹²
- Spare patients inconvenience, anxiety, and discomfort associated with metal staple removal^{11,13}
- Potentially less pain immediately post-op^{14,Ω}

C-SECTION

1 YEAR POST-OP

ABDOMINOPLASTY

1 YEAR POST-OP

MIDLINE INCISION

1 YEAR POST-OP

There are multiple factors that can affect patient results and recovery and these results may not be representative.

ORDERING INFORMATION

INSORB® Skin Stapler

NUMBER	DESCRIPTION
2030	INSORB Absorbable Skin Stapler — Box of 6
9100	INSORB Double Adson Forceps

IMPORTANT SAFETY INFORMATION

INSORB® Subcuticular Skin Stapler is intended for use in the subcuticular closure of skin where an absorbable tissue fastener is desired for temporary tissue approximation. Contraindicated for: thin or thick tissue, and scar tissue where effective tissue capture cannot be achieved; if the needle path is obstructed; and when radiopacity or prolonged tissue approximation is necessary or desired. For detailed instructions and risk information, please refer to the Instructions for Use. www.insorb.com/instructions-for-use
