CooperSurgical Continues to Advance Quality & Innovation

Leading Women's Health Company Announces ISO-certification & multiple Innovation Centers Openings

TRUMBULL, Conn., August 30, 2022 – CooperSurgical, a global leader in women's health and fertility, today shared news on their advancements in quality and innovation.

CooperSurgical's Genomics Lab in Livingston, New Jersey received its ISO 15189 accreditation, the first PGT lab in the United States to receive this accreditation. Founded in 1946, the International Organization for Standardization (ISO) establishes quality standards for companies around the world.

"Our Livingston ISO-certification sets us apart from our competition and is tangible evidence of the company's commitment to quality, in addition to delivering best-in-class outcomes and technology. Receiving the ISO 15189 accreditation requires a rigorous process, including an assessment of the laboratory, a review of all staff qualifications and all equipment in place as well as supplies, quality assurance and analytical factors," stated Charles Smith, SVP of QA, RA, & Life Sciences at CooperSurgical.

Additionally, last week, CooperSurgical celebrated the opening of a completely rebranded and renovated Innovation Center in Houston, TX, providing dedicated space for their laboratory and team of engineers to advance life sciences clinical testing. In the coming months, CooperSurgical Innovation Centers will be opening in Boston, and in other locations across the globe, allowing key CooperSurgical team members to focus in within their specific areas of research and development and drive advancements in women's healthcare and fertility.

"We continue to demonstrate our commitment to overall excellence through the investments in our Innovation Centers, as well as in receiving the ISO accreditation," stated Holly Sheffield, President, CooperSurgical. "Our innovation centers in Houston, Boston and additional locations all across the globe, strengthens the company's focus on research and development and allows us to continue to solve unmet needs for physicians and their patients."
