COOPERSURGICAL® ACQUIRES AEGEA MEDICAL

Trumbull, Conn. (February 2, 2021) — CooperSurgical announced today the acquisition of California-based, AEGEA Medical and its FDA-approved Mara™ Water Vapor Ablation System. The acquisition builds on over 30 years of experience in women's healthcare and complements CooperSurgical's growing portfolio of medical products focused on clinic and practice-based women's health.

Mara is an endometrial ablation treatment that uses water vapor to safely treat heavy menstrual bleeding, specifically designed for use in the doctor's office. Mara is a two-minute, in-office treatment that ablates the lining of the uterus, the source of heavy menstrual bleeding in women who have not reached menopause. Heavy menstrual bleeding, also known as menorrhagia, is a common condition about one-third of women seek treatment for during their lifetimes¹.

Clinical study data demonstrates that Mara safely and effectively reduces heavy menstrual bleeding and improves a woman's quality of life. Mara treats patients with myomas, large cavities and also provides post-ablation cavity access.

"I'd like to thank Maria Sainz and her team, CEO of Aegea, for her dedication to innovation in women's health," said Holly Sheffield, President of CooperSurgical. "The Mara Water Vapor Ablation System gives women a great option for a safe and convenient in-office procedure to help with what can often be a debilitating health issue."

Mara Clinical Results

One year after treatment in an international, multi-center pivotal clinical trial that enrolled 155 women, 93% of women reported no to moderate bleeding². Results also demonstrated the following:

- **99% of patients experienced improvement in quality of life³**
- **91% of patients satisfied or very satisfied with procedure^{2,3}**
- **93% said they would recommend it to a friend²**
